

### **Supplementary Material**

**Supplementary Table 1:** Stroke process time metrics recommended by the Society of Neurointerventional Surgery Standards and Guidelines Committee<sup>1</sup>

Workflow interval	SNIS „ideal time“
Door to physician	On arrival
Door to non contrast CT/CT angiography	On arrival
Door to stroke team	<10 min
Door to non contrast CT interpretation	<15 min
Door to CT angiography interpretation	<20 min (or <10 min after acquisition)
Door to intravenous thrombolysis	<30 min
Door to CT perfusion/MRI (when needed)	<30 min
CSC door to puncture	<60 min
CSC door to recanalization	<90 min
PSC picture to CSC puncture	<90 min*

\*Assuming direct transfer to biplane neuroangiography suite when feasible
