Patient Protection and Affordable Care Act of 2010: a primer for NeuroInterventionalists

Laxmaiah Manchikanti,1,2 Joshua A Hirsch3

ABSTRACT

The Patient Protection and Affordable Care Act (the ACA, for short) became law on 23 March 2010. It represents the most significant transformation of the American healthcare system since Medicare and Medicaid. Essentials of ACA include: (1) a mandate for individuals and businesses requiring as a matter of law that nearly every American has an approved level of health insurance or pay a penalty; (2) a system of federal subsidies to completely or partially pay for the newly required health insurance for nearly 34 million Americans who are currently uninsured—subsidized through Medicaid and Exchanges; (3) extensive new requirements on the health insurance industry and (4) changes in the practice of medicine. The Act is divided into 10 titles. It contains provisions that went into effect starting on 21 June 2010 with many of the provisions going into effect in 2014 and later. The ACA goes well beyond insurance and payment reform. Practicing physicians will potentially be impacted by the Independent Payment Advisory Board and the Patient Centered Outcomes Research Institute.

INTRODUCTION

On 23 March 2010, President Obama signed into law the most sweeping healthcare system reform legislation since Medicare was enacted in 1965. The debate has been both heated and divisive. There is a substantial literature that has emerged both in support of and in opposition to the Patient Protection and Affordable Care Act of 2010 (the ACA, for short).1–3

Supporters of the law maintain that the passage of comprehensive healthcare reform legislation presents tremendous opportunities to improve the way that America’s healthcare system works. They believe that the reforms to expand coverage hold the potential to help millions of Americans. The opponents of the healthcare reform claim that ACA will transfer one-sixth of the US economy into the hands of politicians and agency bureaucrats.

Manchikanti et al5 recently published an article on the impact that the ACA will have on interventional pain management. There were elements of that review that would serve as useful background for NeuroInterventional specialists. For that reason, this brief communication was undertaken.

ACA implementation

The Act is divided into 10 titles. It contains provisions that went into effect starting on 21 June 2010, with the majority of the provisions going into effect in 2014 and later (table 1).

ESSENTIALS OF ACA

Essentials of ACA have been described in multiple publications, many of them partisan and opinion based. We endeavor to present the facts while limiting our commentary.

There are charges for those who fail to buy health insurance and a penalty on employers above a certain size who do not cover their employees. The Internal Revenue Service is the agency charged with enforcement. Those penalties on individuals, after a brief start-up period, are $695 annually for each individual (limited to three times that amount for any family) or 2.5% of income, whichever is greater. An individual without the required insurance and with an income of $20,000 pays a tax of $695; at $50,000 the tax is $1250; at $100,000 it is $2500.

The ACA establishes a system of subsidies for the purchase of health insurance that are based primarily on income and family size. The first subsidy is an expansion of the existing Medicaid program to include every American whose income is under ‘133% or 158% of poverty’. In practical terms, in 2014, when Medicaid expansion takes place, individuals with incomes less than $15,800 or families of four with incomes less than $25,200 will become eligible for comprehensive, affordable health insurance.

Under ACA, there will be a new national uniform income qualification—having an income below the ‘133% or 158% of poverty’ level—and there is no longer any requirement to spend other assets or to belong to a covered category. This expansion of Medicaid eligibility is expected to provide health insurance to 18 million additional Americans by 2019.

The second of these subsidies is an extensive cost-sharing arrangement for health insurance purchased through new Exchanges. The Exchanges are designed to be state-run administrations that will organize and approve health insurance plans being sold by the insurance industry and present those plans accurately and in place as a form of ‘one-stop shopping’. The health insurance offered through these Exchanges is primarily available to those without employer-provided health insurance. These subsidies are available to Americans whose income is up to 400% of poverty ($95,700 for a family of four in 2014). At ‘133% or 158% of poverty’, an individual is responsible for the cost of health insurance up to a level of 2% of...

</tr>
</thead>
<tbody>
<tr>
<td>2010 Business tax credits</td>
<td>Small businesses with no more than 25 employees and average annual wages of $40,000 would receive tax credits to help provide insurance to employees. The tax credit would be up to 35% of the employer’s contribution if the employer pays 50% of the total premium cost.</td>
<td>2010 tax year, with the credit increasing up to 50% in 2014</td>
</tr>
<tr>
<td>Temporary reinsu...</td>
<td>A $5 billion temporary reinsurance program would be created for employees to provide healthcare coverage for retirees over the age of 55 who are not eligible for Medicare.</td>
<td>90 days after enactment</td>
</tr>
<tr>
<td>Temporary high-risk insurance pool</td>
<td>A $5 billion temporary national high-risk insurance pool would be created to provide health coverage to individuals with pre-existing medical conditions who have been uninsured for at least 6 months.</td>
<td>90 days after enactment</td>
</tr>
<tr>
<td>Pre-existing conditions</td>
<td>Insurance companies would be barred from denying coverage to children who have pre-existing medical conditions.</td>
<td>6 months after enactment</td>
</tr>
<tr>
<td>Adult dependent children</td>
<td>Insurance companies would have to provide coverage for dependent children up to the age of 26.</td>
<td>6 months after enactment</td>
</tr>
<tr>
<td>Insurance coverage limits</td>
<td>Insurance plans would be prohibited from placing lifetime limits on how much they pay out to individual policyholders and from rescinding coverage except in cases of fraud.</td>
<td>6 months after enactment</td>
</tr>
<tr>
<td>Medicare drug rebates</td>
<td>Medicare patients who face a gap in prescription drug coverage would receive a 1-year, $250 rebate to help pay for medication.</td>
<td>Immediately</td>
</tr>
<tr>
<td>Tanning salon tax</td>
<td>A tax of 10% would be imposed on the cost of indoor tanning services.</td>
<td>Immediately</td>
</tr>
<tr>
<td>Preventive services</td>
<td>Health insurance plans would be required to cover preventive services such as immunization for children and cancer screenings for women.</td>
<td>6 months after enactment</td>
</tr>
<tr>
<td>2011 Tax changes on healthcare savings accounts</td>
<td>The federal tax on individuals who spend money from healthcare savings accounts on ineligible medical expenses would double to 22%.</td>
<td>1 January 2011</td>
</tr>
<tr>
<td>Community health centers</td>
<td>Funding would increase by $11 billion for community health centers that provide medical care to patients who can not afford it.</td>
<td>1 October 2011</td>
</tr>
<tr>
<td>Medicare ‘doughnut hole’</td>
<td>Drug companies would provide a 50% discount on brand-name prescription drugs for seniors who face a gap in drug coverage. More subsidies would be phased in through 2020, when the coverage gap would be closed.</td>
<td>1 January 2011</td>
</tr>
<tr>
<td>Primary care</td>
<td>Primary care doctors and general surgeons practicing in areas that lack primary care doctors would receive a 10% bonus payment under Medicare.</td>
<td>1 January 2011 through 2015</td>
</tr>
<tr>
<td>Long-term care</td>
<td>A voluntary long-term care program called CLASS* would be created. After at least 5 years of contributions, enrollees would be entitled to a $50-a-day cash benefit to pay for long-term care.</td>
<td>1 January 2011</td>
</tr>
<tr>
<td>New annual fee on drug-makers</td>
<td>A total annual fee of $2.5 billion would be imposed on pharmaceutical manufacturers.</td>
<td>1 January 2011</td>
</tr>
<tr>
<td>Insurance rebates</td>
<td>Health insurance companies would be required to provide rebates to enrollees if they spend &lt;95% of their premium dollars on healthcare as opposed to administrative costs.</td>
<td>1 January 2011</td>
</tr>
<tr>
<td>2012–2013 Annual fee on drug-makers</td>
<td>The annual fee on pharmaceutical manufacturers would increase to $3 billion each year through 2016.</td>
<td>1 January 2012</td>
</tr>
<tr>
<td>Contribution limits on healthcare savings accounts</td>
<td>The limit on how much individuals could contribute to flexible savings accounts that let people set aside money tax free for health costs would be set at $2500. Currently employers set the limit.</td>
<td>1 January 2013</td>
</tr>
<tr>
<td>Itemized deductions for unreimbursed medical expenses</td>
<td>The threshold for deducting such expenses would increase from 7.5% of adjusted gross income to 10%.</td>
<td>1 January 2013</td>
</tr>
<tr>
<td>Medicare taxes</td>
<td>The Medicare tax rate would increase by 0.9 percentage points—from 1.45% to 2.35%—on earnings over $200,000 for individuals and $250,000 for families. Also, for the first time, a 3.8% Medicare tax would be imposed on unearned income.</td>
<td>1 January 2013</td>
</tr>
<tr>
<td>2014 Individual mandate</td>
<td>Most Americans would be required to buy health insurance or pay fines of $95 per individual up to $285 per family or 1% of taxable household income, whichever is greater.</td>
<td>1 January 2014</td>
</tr>
<tr>
<td>Employer requirements</td>
<td>Companies with ≥50 employees would pay a fine if any of their full-time workers qualified for federal healthcare subsidies.</td>
<td>1 January 2014</td>
</tr>
<tr>
<td>Medicaid expansion</td>
<td>The program for low-income Americans under the age of 65 would expand by increasing the income eligibility to 133% of federal poverty, or $29,327 for a family of four.</td>
<td>1 January 2014</td>
</tr>
<tr>
<td>Federal subsidies</td>
<td>Federal subsidies, which vary based on household income, would help offset the cost of buying insurance for Americans and legal residents who qualify.</td>
<td>1 January 2014</td>
</tr>
<tr>
<td>Annual fee on insurance companies</td>
<td>An annual fee totaling $8 billion would be imposed on health insurance companies.</td>
<td>1 January 2014</td>
</tr>
<tr>
<td>Health insurance Exchanges</td>
<td>A state-based healthcare Exchange—a marketplace where uninsured individuals and small businesses could comparison shop for insurance policies—would be created.</td>
<td>1 January 2014</td>
</tr>
<tr>
<td>2015–2016 Individual mandate</td>
<td>Penalties for not carrying insurance would increase to $325 for each family member up to $975 per family or 2% of taxable household income, whichever is greater.</td>
<td>1 January 2015</td>
</tr>
<tr>
<td>Annual fee on insurance companies</td>
<td>The annual fee on health insurance companies would increase to $11.3 billion.</td>
<td>1 January 2015</td>

*Family with an income of $30 000 would qualify for Medicaid, which is not directly comparable with the Exchange policies. It would not typically have a premium cost and out-of-pocket costs vary by state. This figure is an estimate based on Medicaid having a value of 95% of the total cost of healthcare. Source: Kaiser Family Foundation ‘Health Reform Subsidy Calculator’ (http://healthreform.kff.org/SubsidyCalculator.aspx)²

Note: Based on purchase of the ‘silver’ plan (70% actuarial value); family of 4, 45-year-old policyholder, medium cost area, health insurance policy cost of $14 245 (estimated by Kaiser) in 2014.

### IMPACT ON HEALTHCARE SPENDING

According to Congressional Budget Office (CBO) estimates, the number uninsured will be reduced by 52 million from the current level of 50 million. Despite this seemingly impressive number it will leave 25 million residents without health insurance in 2019 after the Act is fully implemented.⁶ ⁷ It is also estimated that private insurance enrollment will rise steeply as a projected 15.8 million obtain coverage through health insurance Exchange plans in 2014.⁸

Provisions to expand coverage under the ACA will not affect large numbers of Americans until 2014. In the interim, it is likely that employer-sponsored insurance will continue to decline because premiums will almost certainly grow faster than wages and salaries,⁷ and the number of uninsured people is likely to increase.

After 2014, self-employed Americans and most workers in small firms will be allowed to purchase coverage through insurance Exchanges. The Medicaid expansion will add comprehensive coverage at little or no cost for the lowest-income adults with help to solidify the safety net and prevent the erosion of coverage among adults in future economic downturns.

In dealing with those who are privately insured, there is substantial debate on the impact of the ACA on premiums. While the administration officials have said that there will be reduction in premiums of $2500 for each individual,⁹ others have estimated that these premiums will increase significantly. However, the Office of the Actuary at the Centers for Medicare and Medicaid Services (CMS) in their report released in April 2010 projected that ACA would increase the number of Americans with health insurance coverage but would also increase projected spending by ~1% over a period of 10 years.¹⁰

Per the authors of the law, the ACA includes a series of Medicare reforms that will generate billions of dollars in savings for Medicare and strengthen the care Medicare beneficiaries receive.¹¹ In addition, the Medicare Hospital Insurance Trust Fund is increased by 12 years, more than doubling the time before the exhaustion of the trust fund.¹² CMS also noted that, historically, Medicare has often led the entire healthcare system in the adoption of quality and payment innovation. Consequently, they claim that the ACA ensures that Medicare will continue to serve as a leader in driving the widespread adoption of innovative quality and payment strategies.

Based on their claims of the savings, the law’s authors have projected Medicare’s fiscal outlook, both with and without passage of ACA. According to their calculations, by 2019 Medicare spending will grow by 6.8%, reaching $978 billion; with reform, spending will grow 5.3%, reaching $852 billion (figure 1).

Further, Foster,¹³ Chief Actuary of CMS, in his analysis accompanying the Annual Report of the Medicare Board of Trustees, noted that Medicare per assumptions of the ACA, predicts that payment rates for doctors and hospitals serving seniors will be cut by 30% over the next 5 years. While the ACA, as amended, makes important changes to the Medicare program...
and substantially improves its financial outlook, there is a strong likelihood that certain of these changes will not be viable in the long range. He further reported that, specifically, the annual price updates for most categories of non-physician health services will be adjusted downward each year by the growth in economy-wide productivity. The best available evidence indicates that most healthcare providers cannot improve their productivity to this degree—or even approach such a level—as a result of the labor-intensive nature of these services.

Medicare Advantage Plans will have a significant impact on the Medicare budget and seniors. Medicare payments to plans are estimated to total $116 billion in 2010, accounting for 22% of total Medicare spending. The ACA reduces the federal payments to Medicare Advantage Plans over time, bringing them closer to the average costs of care under the fee-for-service Medicare program. The law also provides new quality bonus payments to plans, beginning 2012, and beginning in 2014, will require plans to maintain a medical loss ratio of at least 85%, restricting the share of premiums that Medicare Advantage firms can use for administrative expenses and profits.

Estimates from the CBO suggest that Medicaid will add 16 million enrollees, 50% of the expected 32 million, to Medicaid. The expanded coverage will be free to the states at least through 2016 and to uninsured persons whose income qualifies them for it. That having been said, it is well known that eligibility for health insurance does not always translate into actual enrollment—as evidenced by the millions of uninsured adults who are already eligible for Medicaid under current law.

There are multiple other regulations impacting Medicare and Medicaid in the healthcare law. One such is the 15-member Independent Payment Advisory Board (IPAB) whose task is to make recommendations to reduce the per capita growth rate in Medicare spending. Another law having an affect is the Medicare Innovation created by the ACA, has not been

**Administrative Spending and Regulations**

Regulatory reform is a part of the ACA. To put the size of the existing regulatory regime into perspective, Conover, estimated that the net cost of health services regulation was $169.1 billion annually in 2004.

In October 2009, a Thomson–Reuters report stated that the healthcare system wastes between $505 billion and $850 billion every year, an estimated one-third of the nation’s healthcare bill. This report indicates that healthcare waste can be attacked and healthcare costs can be reduced without adversely affecting the quality of access of care. This report shows that elimination of paper-based medical record systems will save 6% of the spending.

**Impact on Practice of Medicine**

The ACA will make health insurance available to an additional 34 million Americans. However, while insurance may be provided, the coverage for many procedures may be either diminished or eliminated. There are well over 100 sections of the law dealing with various aspects of the Medicare programs including some reduction in payments for physician services.

The Congressional Research Service in its 21 April 2010 report observed that the law makes several changes to the Medicaid program that have the potential to affect physicians and how they practice. The report also adds that while some of the provisions have clear and direct consequences, for instance, altering physician reimbursement right away, others have the potential to influence how physicians might practice in the future by changing the incentives to encourage improvements in the organization and delivery of care.

**Independent Payment Advisory Board**

The IPAB is based on the philosophy that there is a need for a board of impartial experts to oversee the healthcare system. The legislation established specific target growth rates for Medicare and charges the IPAB with ensuring that Medicare expenditures stay within these limits. The IPAB must also make recommendations to Congress as to how to control healthcare costs. The IPAB will have 15 members appointed by the President for a 6-year term, supplemented by three officials representing the Department of Health and Human Services (DHHS). IPAB members are supposed to be nationally recognized experts in health finance, payment, economics, actuarial science, or health facility and health plan management, and to represent providers, consumers and payers. The ACA appropriated $15 million for the IPAB for 2012 and increases its funding at the rate of inflation for subsequent years. The purpose of the IPAB is to reduce the per capita growth rate in Medicare spending indefinitely. It should be noted that in most years Medicare’s per capita growth has been below or equal to growth in the private sector. There is no congressional authority over this board. The CBO concluded in its analysis of the ACA that the IPAB would reduce Medicare spending by $28 billion over the period 2010–2019, with significant savings continuing beyond 2019.

Many questions remain about how the IPAB will work. The relationships between the IPAB and other boards and commissions, such as the MedPAC and the Centers for Medicare and Medicaid Innovation created by the ACA, has not been
The CBO, in its scoring of the ACA, considered that one of the significant ways of paying for expanding health insurance coverage was the use of premiums from the new Community Living Assistance Services and Support (CLASS) Act Entitlement. In this proposal, the legislation begins collecting premiums for this insurance in 2015, but does not begin paying out benefits until 2020, which is outside of the CBO 10-year time horizon. The CBO scoring of the legislation takes those first 5 years of premiums and drives them to pay for its expansion and coverage. The diversion represents $70 billion of the offsets to the costs of the legislation. It also assumes that when it becomes necessary to begin paying benefits in 2020, there will be other premiums from other Americans to cover the cost. The second issue is related to the credit of $198 billion savings from reducing Medicare provider rates in future years. This is widely opposed by the physician community and has never been realized in the past.

### Health insurance premiums

Several health insurers stated that they are seeking rate increases as a direct result of the law or unrelated to ACA. The rate increases also apply mostly to employees of small businesses of fewer than 50 people and to people who buy plans as individuals. It has been estimated that some customers could experience rate increases of >20%. However, the administration stated that insurers had already planned to raise rates and were using the Bill as an excuse. In addition, some insurance companies also announced that in response to the law, they would end the issuance of new child-only policies.

The DHHS informed that health insurers that raise premiums by ≥10% will face new regulatory scrutiny. Under the guidelines, which are preliminary, insurers would have to post detailed justifications online when the proposed double-digit rate hikes are introduced. The rules also define more clearly how regulators should ascertain whether a rate increase is reasonable.

The issue of enrollment of persons with pre-existing conditions is one of the most important achievements of ACA. However, the data show that only 8000 have enrolled in a health plan for pre-existing conditions as of 1 November 2010. Almost 6 million Americans are potentially eligible for the program, and the CBO projects that enrollment will average 200,000 a year between 2011 and 2013.

### State opt-outs

Beginning 2017, opt-out provision in the health reform law allows states to request federal waivers to be exempted from certain requirements in the law. As an example, states could opt out of the law’s requirements for mandatory coverage, health insurance Exchanges and penalties for employers that do not provide coverage. However, states must first revise a coverage program that is at least as comprehensive and affordable as the health reform law, as judged by Secretaries of DHHS as well as the Treasury.

### Medical loss ratios

The DHHS issued final regulations on 22 November 2010 on what health insurers must do to meet the medical-loss ratio requirement as part of the new health system reform law. Starting in January 2011, if health plans do not spend enough of their premium dollars on medical care and quality improvement, they must provide a rebate to customers in 2012. Further, insurers will need to report publically how they spend premium dollars
beginning next year. The regulations also specify that insurance companies in the individual and small group markets need to spend at least 80% of the premium dollars they collect on medical care and quality improvement activities whereas those in the large group market must spend at least 85%. DHHS believes that these overhead costs contribute little or nothing to the care of patients and the health of consumers.

CONCLUSION

The ACA is historic and produces legislative changes to healthcare greater than any that many US-based doctors have experienced in their lifetime. NeuroInterventionalists, as well as other providers, should be familiar with this legislation as it will likely have impact on their practice.
