

Supplemental figure 1

Supplemental Fig. 1 Sensitivity analysis: Kaplan–Meier curves of time to recurrence in the propensity-matched analysis of 43 pairs

We conducted a sensitivity analysis for WHO grade 1 meningioma matching without adjustment for Simpson grade and mib-1 (Factors unknown before surgery).

Recurrence-free survival (RFS) in the preoperative embolization group vs. no-embolization group (mean RFS, 57.2 vs. 41.4 months; log-rank $p = 0.107$; Wilcoxon $p = 0.035$).
